Sector breakdown of equities

Manager's commentary

During the month of May, the compartment posted a return of 26%. The managers carried out targeted adjustments to optimize the positioning. On the sell side, light profits were taken on the US memory chip manufacturer Micron Technology; nevertheless, it remains the largest position in the compartment. The stock experienced a particularly strong run thanks to the exponentially rising demand for memory chips for artificial intelligence, causing its market capitalization to cross the historic milestone of 1 trillion. The position in the French company Soitec was also reduced to secure the capital gains achieved. Although the company has solid growth prospects within data center infrastructure, the most recent quarterly results pointed to an ongoing inventory correction in the automotive sector and the smartphone market. Furthermore, the managers lowered the exposure to South Korean Samsung Electronics. With these transactions, the managers aim to rebalance the weightings of these strongly performing semiconductor players and keep the compartment's risk profile healthy in a dynamic market environment.

Risk

For the risk indicator, it is assumed that you hold the product for 5 years. The actual risk can vary significantly if you sell at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that investors will suffer losses on the product because of market developments or because there is no money available for payment. We have classified this product in class 5 out of 7; this is a medium-high risk class. This means that potential losses on future performance are estimated as medium-high, and that the chance that we will not be able to pay you because of poor market conditions may be high. **Be aware of the currency risk.** You may receive payments in a currency different from the reference currency, so the final return you receive will depend on the exchange rate between the two currencies. That risk is not taken into account in the indicator above. The compartment is also exposed to the following materially relevant risks that are not included in the summary risk indicator : Other risk factors may exist. Because this product is not protected against future market performance, you may lose all or part of your investment. If we cannot pay you what is owed to you, you could lose your entire investment.

Sustainability

This compartment applies a responsible investment policy based on four strategies : negative screening°, norms-based screening°, ESG integration°, and a best-in-universe approach in which only companies with strong ESG scores are selected. In addition, companies involved in controversial activities such as weapons production, tobacco and harmful oil and gas extraction are excluded. This compartment also actively uses its voting rights to promote sustainability and good governance. To learn more about this, you can consult this compartment's sustainable investment policy via link. If you wish to invest in this compartment, all of its sustainable characteristics and objectives must be taken into account.

Investment policy

The objective of the compartment is to offer investors, through an actively managed portfolio, long-term capital appreciation on their investment. This objective will be pursued by investing the compartment's assets principally in shares and other equity-type securities of companies that are wholly or partly active in the technology and communication services sector, without geographical limitation. The compartment must hold at least 90% of its net assets in shares. The compartment invests mainly in shares and other equity-type securities of companies that are wholly or partly active in the technology and communication services sector. The compartment will invest in shares and other securities of companies active in developed markets and in companies active in emerging markets. The compartment may invest in shares and other securities whose selection will be based on ongoing financial assessments, analysis of the macroeconomic environment and the specific profile of the issuer, future developments, etc. There are no limitations or restrictions with regard to currencies and geographical regions or other specific economic or industrial sectors or niches. The choices made by the Investment Manager are discretionary and reflect its expectations and strategic views. The compartment's investment policy is based on three cornerstones in equity selection : a disciplined multi-step approach in the Investment Manager's research and analysis, a unique non-benchmark philosophy and the importance of on-the-ground research. Investments are made on the basis of conviction rather than benchmarks : conviction in themes, conviction in countries and conviction in companies. With regard to investment themes, the Investment Manager will focus on "exponential" technologies that have a disruptive impact on society and business, as well as on communication services, including, but not limited to, the following sub-themes : artificial intelligence (AI), augmented and virtual reality (AR, VR), data science, cloud, IoT, digital biology, nanotechnology and digital manufacturing, networks and computer systems, robotics and autonomous vehicles. For the purpose of hedging currency risk, the compartment may invest in currency derivatives. The compartment promotes environmental or social characteristics. A sustainable investment policy applies to this compartment and can be consulted at <https://www.econopolis.be/en/sustainabilitylink>. Additional information on sustainability is available in the fund prospectus. Benchmark : The portfolio is actively managed on a discretionary basis without reference to a benchmark. Investors can obtain a summary of investors' rights (available in Dutch, French and English) on this webpage :link.

Fiscal regulation

Withholding tax on dividends* : 30.% (only applicable to DIS)

Technical terms^o

Actuarial return	The annual return that an investor can expect from an investment over a given period, taking into account the reinvestment of intermediate income such as coupons or dividends.
Management fee	De jaarlijkse vergoeding die de fondsbeheerder aanrekent voor het beheer van het compartiment.
Fundsquare	An online platform where financial information about funds and their Net Asset Values (NAV) is published.
SFDR classification	Sustainable Finance Disclosure Regulation. This classification indicates the extent to which a fund integrates sustainability criteria into its investment strategy.
NAV (Net Asset Value)	Unit value of the internal investment compartment (e.g., on the stated date and in the currency of the internal fund).
Number of positions^o	The total number of securities from the above asset class in the compartment.
Negative screening	Exclusion of companies through, among other things, the Norwegian exclusion list.
Norms-based screening	The investment process in which companies are screened for compliance with international standards, such as those of the United Nations, and potentially excluded if they violate these standards.
ESG integration	his is the strategy of integrating Environmental, Social, and Governance (ESG) criteria into the investment process.
Month To Date	Shows the return or performance from the beginning of the current month up to the most recent valuation date (see 'Data as of' below).
Year To Date	Shows the cumulative return or performance from the beginning of the calendar year up to the most recent valuation date (see 'Data as of' below).
Consumer staples	Products that people continue to buy regardless of economic conditions, such as food, beverages, and personal care items. These are basic necessities and therefore show little fluctuation in demand.
Consumer discretionary	Products for which demand is highly dependent on the economic cycle, such as cars, travel, and luxury goods. During periods of economic growth, demand increases, while it often declines during recessions.
Emerging markets	This refers to the financial market of a country that has so far lagged in economic development but whose prospects are promising.
