Sector breakdown of equities

Manager's commentary

During the month of May, the compartment posted a return of 25%. The managers carried out targeted adjustments to optimize the positioning. On the sell side, light profits were taken on the US memory chip manufacturer Micron Technology; nevertheless, it remains the largest position in the compartment. The stock experienced a particularly strong run thanks to the exponentially rising demand for memory chips for artificial intelligence, causing its market capitalization to cross the historic milestone of 1 trillion. The position in the French company Soitec was also reduced to secure the capital gains achieved. Although the company has solid growth prospects within data center infrastructure, the most recent quarterly results pointed to an ongoing inventory correction in the automotive sector and the smartphone market. Furthermore, the managers lowered the exposure to South Korean Samsung Electronics. With these transactions, the managers aim to rebalance the weightings of these strongly performing semiconductor players and keep the compartment's risk profile healthy in a dynamic market environment.

Risk

The synthetic risk indicator assumes that you hold the product until the end of the recommended holding period of 5 years. The actual risk can differ considerably if you choose to exit early, which may result in you getting back less. In the absence of sufficient historical data, the risk indicator contains simulated data based on a reference portfolio. Risk category 5 reflects the possibility of higher gains and/or losses in the value of the portfolio. This results from investments in shares without geographical limitation. The synthetic risk indicator makes it possible to compare the risk level of this product with that of other products and indicates how likely it is that investors will suffer losses as a result of market developments or because insufficient resources are available for payment. Capital is not guaranteed. Important risks not taken into account by the indicator : **Market risk** : Market risk is high because the product invests mainly in shares in accordance with its investment policy. These positions are subject to the risk of loss in value or devaluation. **Currency risk** : As the product invests worldwide in shares, the net asset value may be affected by fluctuations in the exchange rates of investments denominated in currencies other than the currency of the product. **Equity risk** : Risks linked to fluctuations in share prices. **Sustainability risk** : An ESG event or situation that, if it occurs, could have a material adverse (actual or potential) effect on the value of one or more of the product's investments. By applying ESG criteria, the product may perform less well than expected if selected investments underperform the market as a whole and/or products that do not apply ESG criteria, or if investments are sold for ESG reasons. **Risks linked to investments in emerging markets** : Underlying investments may become illiquid under certain circumstances, which may limit the Manager's ability to realise all or part of the assets. These markets involve increased operational, political and economic risks. **Risks linked to investments in frontier markets** : The legal, judicial and regulatory infrastructure in these markets is still developing, which may lead to significant legal uncertainty. Frontier markets differ from emerging markets in that they are less economically developed. Further information for investors is available at : [link](#)

Sustainability

This compartment applies a responsible investment policy based on four strategies : negative screening^o, norms-based screening^o, ESG integration^o, and a best-in-universe approach in which only companies with strong ESG scores are selected. In addition, companies involved in controversial activities such as weapons production, tobacco and harmful oil and gas extraction are excluded. This compartment also actively uses its voting rights to promote sustainability and good governance. To learn more about this, you can consult this compartment's sustainable investment policy via [link](#). If you wish to invest in this compartment, all of its sustainable characteristics and objectives must be taken into account.

Investment policy

The Product invests mainly, with a minimum of 90% of its assets, in shares of companies without geographical limitation and allows investors to benefit from the growth potential of companies active in the field of technological innovation. The Product is aimed at long-term capital growth and allows shareholders subject to corporate income tax to benefit from dividends that are deductible as definitively taxed income. The Product aims to distribute at least 90% of its income annually to distribution shares, after deduction of fees, provisions and expenses, in accordance with article 203 C.I.R. 92 and any subsequent amendments thereto. The Product Manager does not currently use a reference index to measure financial performance and manages the fund actively. The Product's assets consist of shares in companies worldwide that are considered to be well positioned to benefit from the development of technological innovation, both in developed markets (such as Europe, the United States and Japan) and in emerging and frontier markets ("emerging and frontier markets"). The Product may have significant exposure to emerging and frontier markets, but this will never exceed 50% of total assets. In addition, the Product may cumulatively invest up to 10% of its portfolio in money market instruments, units in collective investment schemes, financial derivatives, term deposits and cash. The Manager's investment approach is based on the belief that investments in companies bringing new technologies to market create value. In the selection process, the Manager combines thematic analysis aimed at identifying growth areas within the sector with bottom-up analysis of companies. Particular attention is paid to disruptive technologies, market leaders and innovative players. There are no limitations or restrictions with regard to currencies or geographical regions. The Product does not use financial derivatives. The Product promotes certain environmental and/or social characteristics and good governance practices, but does not have sustainable investment as its objective. Sustainability forms an important pillar of portfolio management. The Product promotes ESG characteristics (environmental, social and governance aspects). Asset selection is based on a process combining various strategies and filters in order to arrive at an appropriate investment universe. This process includes both a negative exclusion approach, aimed at companies or activities, and a positive ("best-in-universe") approach based on independently conducted research. The process consists of two steps. In a first step, certain companies are excluded on the basis of the exclusion list of the Norwegian Government Pension Fund and the principles of the United Nations Global Compact, as well as non-eligible activities such as securities issued by companies whose activity is wholly or partly linked to cluster munitions. In a second step, an ESG filter is applied on the basis of Sustainalytics ESG scores, leading to the retention of companies with very good or excellent ESG profiles and the exclusion of companies with the highest possible controversy score. In addition, the Product takes clearly defined positions with regard to controversial activities. Companies that do not comply with international standards, as laid down in the principles of the United Nations Global Compact (UNGC), or with applicable national regulations, are excluded. Full details of the Product's sustainable investment strategy are available on www.econopolis.be. The Product offers no capital protection or guarantee and no guaranteed return. As the management of the investment portfolio is delegated, the Management Company checks annually that the portfolio manager applies a sustainability policy before investments are made and when decisions are taken. Currency risk is not systematically hedged. The Product currency is the euro. Redemption of participation rights may be requested on each business day on which banks are open in Brussels. Redemption transactions are executed daily. If a day is not a business day for banks in Brussels, the order cut-off date is brought forward to the next business day.

Fiscal regulation

Stock exchange tax on sales* : 1.32% (max. €4.000) (only applicable to CAP)
 Stock exchange tax on conversions* : CAP -> DIS : 1.32% (max. €4.000); DIS -> CAP : 0%.
 *applicable to a natural person resident in Belgium

Warning

The compartment has been approved for distribution only in Belgium and Luxembourg. The prospectus and the key investor information (KIID) are available on the website www.fundsquare.net/homepagelink, where the net asset value is also published. This document is a general document intended for a wide audience and was not prepared on the basis of information about the reader's personal situation. No assessment was made of the reader's knowledge and experience, nor of their financial situation or investment objectives. The financial instruments mentioned in this document may therefore not be appropriate or suitable for the reader. This document therefore contains product information only about the financial instruments mentioned therein and cannot be considered investment advice. The appointed management company of the UCITS is of Luxembourg nationality. The management company may stop marketing the compartment in Belgium. Commercial document : This is an advertisement. Please consult the prospectus of the UCITS and the key information document before making an investment decision.

Technical terms^o

Actuarial return	The annual return that an investor can expect from an investment over a given period, taking into account the reinvestment of intermediate income such as coupons or dividends.
Management fee	De jaarlijkse vergoeding die de fondsbeheerder aanreket voor het beheer van het compartiment.
Fundsquare	An online platform where financial information about funds and their Net Asset Values (NAV) is published.
SFDR classification	Sustainable Finance Disclosure Regulation. This classification indicates the extent to which a fund integrates sustainability criteria into its investment strategy.
NAV (Net Asset Value)	Unit value of the internal investment compartment (e.g., on the stated date and in the currency of the internal fund).
Number of positions^o	The total number of securities from the above asset class in the compartment.
Negative screening	Exclusion of companies through, among other things, the Norwegian exclusion list.
Norms-based screening	The investment process in which companies are screened for compliance with international standards, such as those of the United Nations, and potentially excluded if they violate these standards.
ESG integration	his is the strategy of integrating Environmental, Social, and Governance (ESG) criteria into the investment process.
Month To Date	Shows the return or performance from the beginning of the current month up to the most recent valuation date (see 'Data as of' below).
Year To Date	Shows the cumulative return or performance from the beginning of the calendar year up to the most recent valuation date (see 'Data as of' below).
Consumer staples	Products that people continue to buy regardless of economic conditions, such as food, beverages, and personal care items. These are basic necessities and therefore show little fluctuation in demand.
Consumer discretionary	Products for which demand is highly dependent on the economic cycle, such as cars, travel, and luxury goods. During periods of economic growth, demand increases, while it often declines during recessions.
Emerging markets	This refers to the financial market of a country that has so far lagged in economic development but whose prospects are promising.
