Sector breakdown of equities

Manager's commentary

At the end of April, the European Commission launched the 'Accelerate EU' plan. The goal of this plan is to limit the effects of rising energy prices and reduce dependence on fossil energy sources. This should make the European economy more resilient in the long term. Within the compartment, the managers made several changes in April to optimally position the portfolio for the energy transition and efficiency infrastructure. On the sell side, profit was partially taken on Taiwanese power electronics manufacturers Chroma ATE and Delta Electronics. The remaining position in the Norwegian Tomra Systems, a world leader in recycling and waste sorting solutions, was sold. The freed-up funds were strategically deployed to capitalize on the trend of electrification. For instance, the position was increased in the Japanese conglomerate Hitachi and in the Chinese electric vehicle manufacturer BYD. With this, the compartment strengthens its exposure to market leaders playing a key role in sustainable mobility and the modernization of energy grids.

Risk

For the risk indicator, it is assumed that you hold the product for 5 years. The actual risk may vary significantly if you sell at an early stage, and you may receive back less. The summary risk indicator is a guideline for the risk level of this product compared with other products. The indicator shows how likely it is that investors may incur losses on the product due to market developments or because insufficient funds are available for payments. We have classified this product as class 4 out of 7; this is a medium-risk category. This means that the potential losses on future performance are estimated as moderate, and that there is a possibility that we may not be able to pay you due to adverse market conditions. Be aware of the currency risk. You may receive payments in a currency other than the reference currency, meaning that the final return you receive will depend on the exchange rate between the two currencies. This risk is not included in the indicator above. The compartment is also exposed to the following materially relevant risks that are not included in the risk indicator/ other risk factors may exist. Because this product is not protected against future market performance, you may lose all or part of your investment. If we are unable to pay you what you are owed, you could lose your entire investment. Please refer to the Product's prospectus for more information on the risks.

Sustainability

This compartment applies a responsible investment policy based on four strategies : negative screening^o, norms-based screening^o, ESG integration^o, and a best-in-universe approach in which only companies with strong ESG scores are selected. In addition, companies involved in controversial activities such as weapons production, tobacco, and harmful oil and gas extraction are excluded. This compartment also actively uses its voting rights to promote sustainability and good governance. To learn more about this, you can consult the sustainable investment policy of this compartment via the following link. If you wish to invest in this compartment, all of its sustainable characteristics and objectives must be taken into account.

Investment policy

The objective of the compartment is to offer investors long-term capital appreciation on their investment through an actively managed portfolio. The compartment must hold at least 90% of its net assets in equities. It invests in shares and other equity-like securities of companies active in developed markets (including, but not limited to, Europe, the U.S. and Japan), and may also invest in companies active in emerging markets. The investment universe of the compartment is designed to select companies whose business model is aimed at providing solutions—or components of solutions—to climate change, or companies that have adapted their business model to the increasing challenges of climate change. There are no restrictions regarding currencies or geographical regions. The choices made by the investment manager are discretionary and reflect his expectations and strategic insight. Investment selection is based on ongoing financial assessments, analysis of the macroeconomic environment and the issuer's specific profile, as well as future developments. The investment policy of the compartment relies, for bond selection, on three cornerstones : a disciplined step-by-step approach to research and analysis by the investment manager, a unique non-benchmarked philosophy, and the importance of field research. Investments are based more on conviction than on benchmarks—convictions regarding activities, countries and companies. The compartment may invest in financial derivative instruments such as futures, options, currency forward contracts, credit default swaps or interest rate swaps to achieve its investment objectives and hedge risks. The compartment promotes environmental or social characteristics. A sustainable investment policy applies to this compartment and is available at <https://www.econopolis.be/en/sustainability>. Additional sustainability information is provided in the fund prospectus. Reference benchmark : The portfolio is actively managed on a discretionary basis without reference to a benchmark. Subscription and redemption : Daily. Contact your distributor for cut-off time.

Fiscal regulation

Technical terms°

Actuarial return	The annual return that an investor can expect from an investment over a given period, taking into account the reinvestment of intermediate income such as coupons or dividends.
Management fee	De jaarlijkse vergoeding die de fondsbeheerder aanrekent voor het beheer van het compartiment.
Fundsquare	An online platform where financial information about funds and their Net Asset Values (NAV) is published.
SFDR classification	Sustainable Finance Disclosure Regulation. This classification indicates the extent to which a fund integrates sustainability criteria into its investment strategy.
NAV (Net Asset Value)	Unit value of the internal investment compartment (e.g., on the stated date and in the currency of the internal fund).
Number of positions°	The total number of securities from the above asset class in the compartment.
Negative screening	Exclusion of companies through, among other things, the Norwegian exclusion list.
Norms-based screening	The investment process in which companies are screened for compliance with international standards, such as those of the United Nations, and potentially excluded if they violate these standards.
ESG integration	his is the strategy of integrating Environmental, Social, and Governance (ESG) criteria into the investment process.
Month To Date	Shows the return or performance from the beginning of the current month up to the most recent valuation date (see 'Data as of' below).
Year To Date	Shows the cumulative return or performance from the beginning of the calendar year up to the most recent valuation date (see 'Data as of' below).
Consumer staples	Products that people continue to buy regardless of economic conditions, such as food, beverages, and personal care items. These are basic necessities and therefore show little fluctuation in demand.
Consumer discretionary	Products for which demand is highly dependent on the economic cycle, such as cars, travel, and luxury goods. During periods of economic growth, demand increases, while it often declines during recessions.
Emerging markets	This refers to the financial market of a country that has so far lagged in economic development but whose prospects are promising.
