Crelan Fund EconoFuture

Compartment managers :

Michaël De Man

Stijn Plessers

Compartment description

Crelan Fund EconoFuture is a sub-fund of Crelan Fund, a Belgian SICAV, with Luxembourg management company Luxcellence Management Company SA, and with Econopolis Wealth Management NV acting as the delegated portfolio manager. The sub-fund aims to provide investors with long-term returns by taking moderate risks. It does so by investing in a diversified portfolio of equities and bonds, without favouring any specific geographical region or business sector. Crelan Fund EconoFuture is intended for investors with an investment horizon of at least 5 years and invests up to a maximum of 60% in equities.

Manager's commentary

In August, some profit was taken on the equity portfolio. Owing to the strong performance of equities this year, the weighting had risen. It was scaled back, not because the view on equities is negative, but to keep the risk profile in balance. Across the asset classes, the managers were mainly active in the bond sleeve. They sharply expanded exposure to KBC senior debt maturing in 2037 and strengthened the position in Silfin. In the primary market, they took new positions in Groupe Bruxelles Lambert maturing in 2034 and in Athora Holding. At the same time, the managers divested a Cofinimmo bond line and scaled back a position in a Hungarian development bank. In the equity portion, exposure to emerging markets via a tracker was slightly lowered. The whole reflects a preference for high-quality Belgian and European corporate bonds with an attractive yield profile. The compartment's spread across issuers and maturities thus remains broad.

Risk

	Risk scale							
Lowest Risk	1	2	3	4	5	6	7	Highest risk

The synthetic risk indicator assumes that you hold the Product until the end of the recommended holding period (5 years). The actual risk may vary significantly if you exit at an early stage and you may get back less. The synthetic risk indicator is a guideline for the level of risk of this Product compared to other products. The indicator shows how likely it is that investors will incur losses on the Product due to market developments or because there is no money available for payment. We have classified this Product in risk class 3 out of 7. This is a class with a low to medium risk. This means that the potential losses relating to future performance of the Product are at a low to medium level and if the market situation were to deteriorate, this would likely not have an impact on our payments to you. Risks for this Product that are not sufficiently taken into account by the indicator, but which may lead to a decrease in the net asset value of the Product : **Risks related to investments in emerging markets :** This risk is medium. This concerns the risk associated with investing in emerging markets, which generally have higher volatility than developed (mature) markets and whose value may suddenly rise or fall. Under certain circumstances, underlying investments may become illiquid, which may limit the ability of the Product manager to sell all or part of the portfolio shares. Emerging markets may have less advanced registration systems and regulation than more developed (mature) markets, which may increase operational investment risks. Political risks and adverse economic conditions may occur more frequently in these markets. **Risks related to investments in frontier markets :** This risk is medium. This is the risk related to investing in frontier markets where the legal, judicial and regulatory infrastructure is still under development and which creates significant legal uncertainty for participants in the local market and for foreign participants. The difference between frontier markets and emerging markets is that frontier markets are considered to be somewhat less economically developed than emerging markets. Certain markets are very risky for investors and before investing in a market, investors must verify that they properly understand the associated risks and that it is a suitable investment. **Sustainability risk :** This concerns an ESG event or condition that could potentially or actually have a material adverse effect on the value of the investment of a product. **Risk related to holding Contingent Convertible bonds (CoCos) :** contingent convertible bonds may be automatically converted into shares or be subject to a write-down if the financial strength of the issuer deteriorates in a certain manner. This may result in significant or total losses in the value of the bond. Please refer to the Product prospectus for more information on the risks. This product does not provide protection against future market performance. You may lose part or all of your investment.

Sustainability

This compartment applies a responsible investment policy based on four strategies : negative screening°, norms-based screening°, ESG integration°, and a best-in-universe approach in which only companies with strong ESG scores are selected. In addition, companies involved in controversial activities such as weapons production, tobacco, and harmful oil and gas extraction are excluded. This compartment also actively uses its voting rights to promote sustainability and good governance. To learn more about this, you can consult the sustainable investment policy of this compartment via the following link. If you wish to invest in this compartment, all of its sustainable characteristics and objectives must be taken into account.

Investment policy

The objective of the Product is to aim for an attractive long-term return by taking moderate risks. To achieve this objective, the Product mainly invests in a diversified portfolio of equities (min. 0% and max. 60% of the portfolio) and bonds, without favouring any specific geographical region or sector. The Product has no benchmark. It is actively managed. The investment portfolio manager has a certain degree of discretion in composing the Product's portfolio in accordance with the investment objectives and investment policy.

The Product may also invest up to 10% in money market instruments and 20% in units of collective investment undertakings. The Product may invest up to 5% of its total assets in "contingent convertible" bonds (CoCos). The Product does not invest in shares of companies that are excluded from the investment universe based on the ethical investment guidelines of the Norwegian Government Pension Fund (the "Exclusion List", as published on the website of Norges Bank).

The bonds and debt instruments in which the Product invests are issued by a variety of issuers : governments, public enterprises, private companies and/or international institutions. The issues and/or issuers generally have an investment-grade rating (minimum BBB- and/or Baa3). The Product will not invest more than 50% of its portfolio in high-yield bonds and bonds that have no credit rating. The Product will not invest more than 10% of its portfolio in bonds from emerging and frontier markets with a rating lower than BB- and/or Ba3, and not more than 5% of its portfolio in equities from emerging and frontier markets.

The allocation of assets, as well as the selection of securities, is essentially based on a long-term vision. Currency risk is not systematically hedged. The managers decide whether to hedge currency risk fully or partially depending on their expectations of currency movements relative to the euro. The Product may also invest in financial derivatives such as options, futures, swaps, and similar instruments. The derivatives used are based on equities or equity indices or equity-like instruments, on bonds or bond indices, or on cash in various currencies. This list is not exhaustive. These transactions may be carried out either for hedging purposes or for achieving the Product's investment objectives. Their use does not in itself increase the Product's risk profile.

The Product promotes certain environmental and social characteristics within the meaning of Article 8 of the SFDR and good governance practices through an exclusions policy and binding integration of ESG criteria into the investment process. This policy can be consulted here. Although it does not have sustainable investment as its objective, the Product will contain a minimum share of 60% in sustainable investments. The Product has a minimum alignment of 90% with the E/S characteristics. This policy is mandatory for the Product's manager.

A two-step procedure is applied : – Exclusion of certain companies (mainly based on the Norwegian Government Pension Fund Exclusion List, the United Nations Global Compact, and the IFC Exclusion List), and exclusion of inadmissible activities (e.g., securities issued by companies under Belgian or foreign law whose activities wholly or partly relate to cluster munitions) ; – An ESG filter based on ESG scores from Clarity AI : retaining the best financial product issuers with the best ESG risk scores and excluding companies with the highest controversy scores in terms of severity.

This is a Product with capitalisation shares.

Subscription and redemption : Daily. Please contact your distributor for the cut-off time.

Fiscal regulation

Withholding tax on dividends* : 30.% (only applicable to DIS)
Stock exchange tax on sales* : 1.32% (max. €4.000) (only applicable to CAP)
Stock exchange tax on conversions* : CAP -> DIS : 1.32% (max. €4.000) ; DIS -> CAP : 0%.

Technical terms°

Actuarial return	The annual return that an investor can expect from an investment over a given period, taking into account the reinvestment of intermediate income such as coupons or dividends.
Management fee	The annual fee charged by the fund manager for managing the sub-fund.
Fundsquare	An online platform where financial information about funds and their Net Asset Values (NAV) is published.
SFDR classification	Sustainable Finance Disclosure Regulation. This classification indicates the extent to which a fund integrates sustainability criteria into its investment strategy.
NAV (Net Asset Value)	Unit value of the internal investment compartment (e.g., on the stated date and in the currency of the internal fund).
Number of positions	The total number of securities from the above asset class in the compartment.
Negative screening	Exclusion of companies through, among other things, the Norwegian exclusion list.
Norms-based screening	The investment process in which companies are screened for compliance with international standards, such as those of the United Nations, and potentially excluded if they violate these standards.
ESG integration	his is the strategy of integrating Environmental, Social, and Governance (ESG) criteria into the investment process.
Month To Date	Shows the return or performance from the beginning of the current month up to the most recent valuation date (see 'Data as of' below).
Year To Date	Shows the cumulative return or performance from the beginning of the calendar year up to the most recent valuation date (see 'Data as of' below).
Current yield to maturity°	The expected annual return of a bond if it is held until maturity, taking into account the current market price, coupon payments, and remaining term, averaged across all bond positions in the compartment.
Average coupon yield°	The weighted average of the annual coupon rates of the bonds in the compartment, expressed as a percentage of their nominal value.
Average maturity°	The weighted average period (in years) until the maturity date of the bonds in the compartment.
Average rating°	The weighted average credit quality of the bonds in the compartment, based on the ratings of recognized credit rating agencies (such as S&P Global, Moody's, or Fitch).
Duration°	A measure of the sensitivity of the value of a bond or bond compartment to interest rate changes. The higher the duration, the more strongly the price reacts to interest rate adjustments.
Bond credit ratings	
AAA	De hoogste kredietwaardigheid : extreem laag risico op wanbetaling.
AA	Very reliable debtor, but slightly more sensitive to changes in the economy.
A	Good credit quality, but somewhat more sensitivity to economic changes.
BBB	Still 'investment grade', but close to the threshold of speculative credit. May come under pressure in weaker economic conditions.
BB	Not yet a major risk of default, but vulnerable in the face of economic headwinds.
B	High likelihood of financial stress; obligations can still be met, but the margin is small.
NR (Non rated)	Not assessed by recognized credit rating agencies (S&P Global, Moody's, or Fitch).
Consumer staples	Products that people continue to buy regardless of economic conditions, such as food, beverages, and personal care items. These are basic necessities and therefore show little fluctuation in demand.
Consumer discretionary	Products for which demand is highly dependent on the economic cycle, such as cars, travel, and luxury goods. During periods of economic growth, demand increases, while it often declines during recessions.
Emerging markets	This refers to the financial market of a country that has so far lagged in economic development but whose prospects are promising.
