Compartment description

Crelan Fund EconoStocks is a sub-fund of Crelan Fund, a Belgian SICAV, with Luxcellence Management Company SA acting as the management company and Econopolis Wealth Management NV acting as the delegated portfolio manager. The sub-fund aims to provide investors with long-term returns by taking moderate risks. It does so by investing in a diversified portfolio of equities, without favouring any specific geographical region or business sector.

Sector breakdown of equities

Manager's commentary

The managers substantially expanded the position in Compass Group. Over the summer, the caterer confirmed strong organic growth, high customer retention and an upgraded profit outlook, while the new contracts around the supply of data centres form an additional growth engine. The position in Microsoft was also built up further, as an anchor within the structural investment wave in artificial intelligence. To finance these purchases, the managers trimmed a broad range of lines, including London Stock Exchange, Danone, L'Oréal and Applied Materials. Exposure to Palo Alto Networks was reduced after a strong run, with profit taken. The position in Markel was also lowered. The common thread remains a shift towards resilient, high-quality companies.

Risk

In the risk indicator, it is assumed that you hold the Product during the recommended holding period. The actual risk may vary significantly if you exit at an early stage and you may receive back less. Risk category 4 reflects a moderate profit and/or loss potential of the portfolio. This is attributable to investments in equities and bonds of companies without geographical or sectoral restrictions. The synthetic risk indicator serves as a guideline for the risk level of this product compared with other products. The indicator shows the likelihood that investors may suffer a loss on the Product due to market developments or a lack of funds to make payments. Risks for this Product that are not sufficiently reflected in the indicator but may lead to a decrease in the net asset value of the Product : **Currency risk** : The currency risk is high. Since the Product invests in equities on global markets, the net asset value may be affected by fluctuations in the exchange rates of securities in the portfolio denominated in currencies other than the Product's base currency. **Risks related to investments in emerging markets** : This risk is medium. This refers to the risk associated with investing in emerging markets, which generally have higher volatility than developed (mature) markets and whose value can rise or fall suddenly. Under certain circumstances, underlying investments may become illiquid, which may limit the ability of the Product's manager to sell all or part of the portfolio's shares. Emerging markets may have less advanced registration systems and regulations than more developed (mature) markets, which can increase operational investment risks. These markets may also face more frequent political risks and adverse economic conditions. **Risks related to investments in frontier markets** : This risk is medium. This concerns the risk associated with investing in frontier markets whose legal, judicial, and regulatory infrastructure is still developing, creating significant legal uncertainty for local and foreign participants. The difference between frontier markets and emerging markets is that frontier markets are considered economically somewhat less developed. Certain markets are highly risky for investors, and before investing in them, investors must ensure that they properly understand the associated risks and that it is an appropriate investment. **Sustainability risk** : This concerns an ESG event or circumstance that could potentially or actually have a materially adverse effect on the value of the Product's investment.

Sustainability

This compartment applies a responsible investment policy based on four strategies : negative screening^o, norms-based screening^o, ESG integration^o, and a best-in-universe approach in which only companies with strong ESG scores are selected. In addition, companies involved in controversial activities such as weapons production, tobacco, and harmful oil and gas extraction are excluded. This compartment also actively uses its voting rights to promote sustainability and good governance. To learn more about this, you can consult the sustainable investment policy of this compartment via the following link. If you wish to invest in this compartment, all of its sustainable characteristics and objectives must be taken into account.

Investment policy

The objective of the Product is to seek long-term capital growth by investing in shares of companies without geographical restrictions and in securities providing access to the capital of these companies. To achieve this objective, the Product invests mainly in a geographically and sectorally diversified portfolio of company shares, both in companies in developed markets (Europe, US and Japan) and in companies active in growth markets ("emerging markets and frontier markets"), with a maximum of 10% in the latter markets. Of the selected companies, at least 80% are exposed to long-term trends, notably : agriculture and food, energy, raw materials, ICT (information and communication technologies) and activities responding to the growth, ageing and urbanisation of the world population. The Product does not invest in shares of companies which, based on the ethical investment guidelines of the Norwegian Government Pension Fund (Government Pension Fund Norway) ("Exclusion List", as published on the website of Norges Bank(<https://www.nbim.no/en/responsibility/exclusion-of-companies/>), are excluded from the investment universe. To a limited extent, the Product may also invest up to 10% of its portfolio in money market instruments, units of undertakings for collective investment, derivatives, deposits and cash. The Product has no benchmark. The Product is actively managed. The manager of the investment portfolio has a certain discretionary power in the composition of the Product's portfolio in accordance with the investment objectives and investment policy. Currency risk is not systematically hedged. The managers decide whether or not to fully or partially hedge currency risk depending on their expectations regarding the evolution of currencies against the euro. The Product may also invest in financial derivatives such as options, futures, swaps... The financial derivatives used are based on equities or equity indices or on securities comparable to equities, on bonds or bond indices or on cash in different currencies. This list is not exhaustive. These transactions may equally be carried out for hedging purposes as for achieving the Product's investment objectives. Their use as such does not increase the risk profile of the Product. The Product promotes certain environmental and social characteristics within the meaning of Article 8 of the SFDR and good governance practices through a policy of exclusions and binding integration of ESG criteria in the investment process. This policy can be consulted at : <https://www.crelan.be/nl/particulieren/product/crelan-fund-econostocks>. Although it does not have a sustainable investment objective, the Product will have a minimum share of 75% in sustainable investments. The Product has a minimum alignment of 90% with the E/S characteristics. This policy is binding for the manager of the Product. A two-step procedure is applied : A step to exclude certain companies (mainly based on the Exclusion List of the Norwegian Government Pension Fund and the Global Compact of the United Nations) and to exclude the IFC list of Exclusions and ineligible activities (for example securities issued by companies under Belgian law or foreign law whose activities, in whole or in part, relate to cluster munitions); An ESG filter based on ESG scores from Clarity AI : retention of the best issuers of financial instruments with the best ESG risk score and exclusion of companies with the highest controversy scores in terms of severity. This is a Product with capitalisation shares. Subscription and redemption : Daily. Contact your distributor for cut-off time.

Fiscal regulation

Withholding tax on dividends* : 30.0% (only applicable to DIS)
 Stock exchange tax on sales* : 1.32% (max. €4.000) (only applicable to CAP)
 Stock exchange tax on conversions* : CAP -> DIS : 1.32% (max. €4.000); DIS -> CAP : 0%.

Technical terms°

Actuarial return	The annual return that an investor can expect from an investment over a given period, taking into account the reinvestment of intermediate income such as coupons or dividends.
Management fee	The annual fee charged by the fund manager for managing the sub-fund.
Fundsquare	An online platform where financial information about funds and their Net Asset Values (NAV) is published.
SFDR classification	Sustainable Finance Disclosure Regulation. This classification indicates the extent to which a fund integrates sustainability criteria into its investment strategy.
NAV (Net Asset Value)	Unit value of the internal investment compartment (e.g., on the stated date and in the currency of the internal fund).
Number of positions	The total number of securities from the above asset class in the compartment.
Negative screening	Exclusion of companies through, among other things, the Norwegian exclusion list.
Norms-based screening	The investment process in which companies are screened for compliance with international standards, such as those of the United Nations, and potentially excluded if they violate these standards.
ESG integration	his is the strategy of integrating Environmental, Social, and Governance (ESG) criteria into the investment process.
Month To Date	Shows the return or performance from the beginning of the current month up to the most recent valuation date (see 'Data as of' below).
Year To Date	Shows the cumulative return or performance from the beginning of the calendar year up to the most recent valuation date (see 'Data as of' below).
Consumer staples	Products that people continue to buy regardless of economic conditions, such as food, beverages, and personal care items. These are basic necessities and therefore show little fluctuation in demand.
Consumer discretionary	Products for which demand is highly dependent on the economic cycle, such as cars, travel, and luxury goods. During periods of economic growth, demand increases, while it often declines during recessions.
Emerging markets	This refers to the financial market of a country that has so far lagged in economic development but whose prospects are promising.
Raw materials	Companies active in the extraction and processing of basic materials such as metals, mining, chemicals, and forestry products.
