Sector breakdown of equities

Manager's commentary

This month, the compartment achieved a return of about 3.6%, lifting the return since the start of this year back to well above 50%. The managers expanded the position in NVIDIA ahead of the late-August quarterly results. These confirmed a further acceleration in demand for data-centre infrastructure and underlined the company's central role in the rollout of artificial intelligence. At the same time, the managers took profit on Arista Networks and scaled back the positions in ASML and Innodata after a strong run. The position in Soitec was also slightly reduced. In the background, the memory market remains an important pillar of support for the selection : capacity for high-bandwidth memory is almost fully allocated for this year, which supports pricing at players such as Micron and Samsung. In this way, the managers maintain a healthy exposure to the core beneficiaries of the investment wave in artificial intelligence.

Risk

For the risk indicator, it is assumed that you hold the product for 5 years. The actual risk may vary significantly if you sell at an early stage, and you may receive back less. The summary risk indicator is a guideline for the level of risk of this product compared with other products. The indicator shows how likely it is that investors may incur losses on the product due to market developments or because no funds are available to make payments. We have classified this product as class 5 out of 7; this is a medium-high risk category. This means that the potential losses on future performance are estimated as medium-high, and that the likelihood that we may not be able to pay you due to adverse market conditions can be significant. Be aware of the currency risk. You may receive payments in a currency other than the reference currency, meaning that the final return depends on the exchange rate between the two currencies. This risk is not included in the indicator above. **The compartment is also exposed to the following materially relevant risks that are not included in the risk overview indicator** : Other risk factors may exist. Because this product is not protected against future market performance, you may lose all or part of your investment. If we are unable to pay you what you are owed, you could lose your entire investment. Please refer to the Product's prospectus for more information on the risks.

Sustainability

This compartment applies a responsible investment policy based on four strategies : negative screening^o, norms-based screening^o, ESG integration^o, and a best-in-universe approach in which only companies with strong ESG scores are selected. In addition, companies involved in controversial activities such as weapons production, tobacco, and harmful oil and gas extraction are excluded. This compartment also actively uses its voting rights to promote sustainability and good governance. To learn more about this, you can consult the sustainable investment policy of this compartment via the following link. If you wish to invest in this compartment, all of its sustainable characteristics and objectives must be taken into account.

Investment policy

The objective of the compartment is to offer investors, through an actively managed portfolio, long-term capital appreciation on their investment. This objective will be pursued by investing the compartment's assets mainly in shares and other equity-like securities of companies that are (wholly or partially) active in the technology and communication services sector, without geographical limitation. The compartment must hold at least 90% of its net assets in equities. The compartment invests mainly in shares and other equity-like securities of companies that are (wholly or partially) active in the technology and communication services sector. It invests in shares and other equity-like securities of companies active in developed markets as well as in companies active in emerging markets. The compartment may invest in shares and other equity-like securities selected on the basis of ongoing financial evaluations, analyses of the macroeconomic environment and the specific profile of the issuer, future developments, etc. There are no restrictions regarding currencies, geographical regions, or other specific economic or industrial sectors or niches. The choices made by the investment manager are discretionary in nature and reflect his expectations and strategic insight. The investment policy of the compartment relies on three cornerstones for equity selection : a disciplined, step-by-step approach to research and analysis by the investment manager, a unique non-benchmarked philosophy, and the importance of field research. Investments are based on conviction rather than benchmarks—conviction regarding activities, countries, and companies. With respect to investment themes, the investment manager focuses on exponential technologies that have a disruptive impact on society and business, but also on communication services, including but not limited to the following subthemes : artificial intelligence (AI), augmented and virtual reality (AR, VR), data science, cloud, IoT, digital biology, nanotechnology and digital manufacturing, networks and computing systems, robotics, and autonomous transportation. To hedge risks, the compartment may invest in currency derivatives. The compartment promotes environmental or social characteristics. A sustainable investment policy applies to this compartment, which can be consulted here. Additional information on sustainability is available in the fund prospectus. Reference benchmark : The portfolio is actively managed on a discretionary basis without reference to a benchmark. Subscription and redemption : Daily. Contact your distributor for cut-off time.

Fiscal regulation

Withholding tax on dividends* : 30.% (only applicable to DIS)
 Stock exchange tax on sales* : 1.32% (max. €4.000) (only applicable to CAP)
 Stock exchange tax on conversions* : CAP -> DIS : 1.32% (max. €4.000); DIS -> CAP : 0%.

Technical terms°

Actuarial return	The annual return that an investor can expect from an investment over a given period, taking into account the reinvestment of intermediate income such as coupons or dividends.
Management fee	The annual fee charged by the fund manager for managing the sub-fund.
Fundsquare	An online platform where financial information about funds and their Net Asset Values (NAV) is published.
SFDR classification	Sustainable Finance Disclosure Regulation. This classification indicates the extent to which a fund integrates sustainability criteria into its investment strategy.
NAV (Net Asset Value)	Unit value of the internal investment compartment (e.g., on the stated date and in the currency of the internal fund).
Number of positions	The total number of securities from the above asset class in the compartment.
Negative screening	Exclusion of companies through, among other things, the Norwegian exclusion list.
Norms-based screening	The investment process in which companies are screened for compliance with international standards, such as those of the United Nations, and potentially excluded if they violate these standards.
ESG integration	his is the strategy of integrating Environmental, Social, and Governance (ESG) criteria into the investment process.
Month To Date	Shows the return or performance from the beginning of the current month up to the most recent valuation date (see 'Data as of' below).
Year To Date	Shows the cumulative return or performance from the beginning of the calendar year up to the most recent valuation date (see 'Data as of' below).
Consumer staples	Products that people continue to buy regardless of economic conditions, such as food, beverages, and personal care items. These are basic necessities and therefore show little fluctuation in demand.
Consumer discretionary	Products for which demand is highly dependent on the economic cycle, such as cars, travel, and luxury goods. During periods of economic growth, demand increases, while it often declines during recessions.
Emerging markets	This refers to the financial market of a country that has so far lagged in economic development but whose prospects are promising.
Raw materials	Companies active in the extraction and processing of basic materials such as metals, mining, chemicals, and forestry products.
